CONSULTANT PROFILE

Frej Sundqvist

Fullstack developer with experience building web applications from scratch to production. Strong background in computational physics. Specializes in modern web technologies. Thrives in collaborative environments with hands-on technical involvement.

frejsundqvist@protonmail.com

CURRENT ROLES
System Developer
UI/UX Team Lead

CORE SKILLS
Svelte/SvelteKit
Python/Django

LANGUAGES
Swedish (Native)
English (Fluent)
German (Fluent)
Norwegian (Fluent)

INDUSTRIES
Satellite/Space Tech
Fisheries
Tourism
Infrastructure
Consulting

Work Experience

2024 – present	System Developer / KSAT
2021 – 2024	Fullstack Engineer, Tech Lead / Capia AS

Education

2015 – 2021	M.Sc. Engineering Physics / Umeå University
2018 – 2019	Exchange year / JMU Würzburg, Germany

Tools, Technologies & Methods

Languages	Python, Java, TypeScript, JavaScript, C, Rust, SQL, Bash
Frontend	Svelte, SvelteKit, React, Next.js, Tailwind CSS, HTML, CSS, LESS, Webpack, Vite
Backend	Django, Django REST Framework, FastAPI, Quarkus, Flask, REST APIs, GraphQL, Celery
Databases	PostgreSQL, MySQL, PostGIS, Redis, Flyway
DevOps	Docker, Kubernetes, GitHub Actions, Bitbucket Pipelines, Nginx, OpenTelemetry, Prometheus, Grafana
Azure	Entra ID, Blob Storage, Key Vault, Application Insights, Service Bus, Container Apps, Azure OpenAI
Workflow	Apache Airflow, Kafka, Temporal, Dagster
ML/AI	PyTorch, LLMs, Neural Networks, Image Segmentation, Pandas, NumPy
Auth/IAM	Keycloak, OpenFGA, OpenID Connect, OAuth 2.0, JWT
Other	Git, Linux, Google Cloud, Cloudflare, Agile, Scrum

Project Experience

KSAT – LLM Integration in Web Applications

2025 – present

Project: Integration of Large Language Models into customer web application to enhance user productivity and automate workflows.

Role: System Developer, UI Lead Developer

- Designing and implementing LLM-powered features in production applications
- Building prompt engineering pipelines and evaluation frameworks
- Integrating with Azure OpenAI services

Technologies: Python, Azure OpenAI, Svelte, SvelteKit, TypeScript, Tailwind CSS

KSAT – Central Authorization Service

2025 – present

Project: Development of centralized authorization service for cross-team use across the organization.

Role: System Developer

- Designing authorization models using OpenFGA
- Cross-team collaboration on authorization requirements
- Integration with existing services and applications

Technologies: OpenFGA, Python, Java, Quarkus

KSAT – Customer Portal Development

2024 – present

Project: End-to-end design and development of customer portal. Cloud-hosted fullstack application.

Role: Fullstack Developer, UI Lead Developer, Database Designer

- Designing and building portal from scratch to production
- Database design and API architecture
- Frontend development with Svelte/SvelteKit
- Cloud deployment and infrastructure

Technologies: Svelte, SvelteKit, TypeScript, Tailwind CSS, Python, Java, Quarkus, PostgreSQL, Docker, Azure Container Apps, OpenTelemetry, Temporal, OpenFGA

Capia AS – Live Fish Administration System

2022 – 2024

Project: Full lifecycle development of administration system for live fish management in the aquaculture industry. Built from scratch to production deployment.

Role: Tech Lead, Lead Developer

- Led development team and established technical direction
- Built complete fullstack application from scratch to deployment
- Integrated Keycloak for authentication and authorization
- CI/CD pipeline setup and Linux server administration

Technologies: Django, React, TypeScript, Tailwind CSS, PostgreSQL, Keycloak, Celery, Nginx

Capia AS – Road Infrastructure Analytics Platform

2021 – 2022

Project: Development of analytics platform for road maintenance insights and infrastructure condition monitoring.

Role: Fullstack Developer

- Built web application for road condition data visualization
- Implemented geospatial data processing with PostGIS
- Developed APIs for infrastructure monitoring data

Technologies: Django, React, Python, PostgreSQL, PostGIS, Docker, Nginx, Celery, Tailwind CSS, Apache Airflow

Capia AS – Tourism Industry Analytics Platform

2021 – 2022

Project: Development of register and analytics platform for the tourism industry in Tromsø, built for local authorities.

Role: Fullstack Developer, Project Lead, Customer Contact

- Built web application for tourism data registration and analytics
- Direct customer interaction and requirements gathering
- Implemented data visualization and reporting features

Technologies: Django, React, Python, PostgreSQL, PostGIS, Docker, Nginx, Celery, Tailwind CSS

Capia AS – Smart Car Fleet Insights Hub

2021 – 2022

Project: Consulting project developing insights platform for smart car fleet management with third-party API integrations and data visualization.

Role: Consultant, Developer

- Integrated external vehicle APIs for fleet data collection
- Built data visualization dashboards for fleet insights
- Developed data processing pipelines

Technologies: FastAPI, Python, Pandas, NumPy, PostgreSQL, Redis, REST APIs
